

Safety Advice

Safety advice is available for worker health in the form of SDS sheets stored in an area accessible to all workers when required by law. SDS can also be accessed at www.cdms.net. Workers are instructed in proper handling prior to the use of hazardous substances.

INSTRUCTION

Inventory all your chemicals quarterly including those used in the shop in non-consumer quantities. More than 16 oz aerosol or gallon liquid would normally be considered non-consumer quantities. Then find and organize SDS for those chemicals.
