

Wildlife and Conservation Plan

Our goal is to promote the conservation of wildlife through protection and land management. All unproductive land in existing orchards will be maintained as is in order to provide a habitat for native species.

Habitat conservation will be taken into consideration when newly developed land for planting is planned. Maintaining natural vegetation to harbor wanted insects and small animals natural to the area will be incorporated into the plan.

Careful planning of how the orchard will be laid out will be taken into consideration to minimize damage and deterioration of habitat in order to retain the biodiversity and ecological balance needed to promote conservation in the area.
