

## **Fertilizer Use**

Our goal is to apply fertilizer at the most opportune time to maximize its effectiveness. To accomplish this goal we rely on independent consultants and our own knowledge and experience.

The advisors we use are licensed plant health consultants. A copy of their license is available on file as well as a document that demonstrates their training record.

### **INSTRUCTION:**

If you use a consultant to predict the amount and timing of fertilizer application you will need to provide evidence of that person's qualifications. This can be a course record for WSDA recertification credits, a resume or other similar documents. If you make the decision then you will need to provide similar documentation or be able to demonstrate competence.
