

## **Fertilizer Storage**

If fertilizer is stored on site it is stored in accordance with local regulations. It is kept in an area that is separate from other plant protection products, covered from the weather, clean, dry and reduces the chances of contamination to the water and environment. An inventory is conducted within a month after there is a movement of stock.

### **INSTRUCTIONS:**

Review the way you store fertilizer and make sure that it meets the above requirements. Inventory your fertilizer at least quarterly and have a copy of the inventory available at your audit.
