

## Preventing Pesticide Drift

7.3.8 Refers to active measures being taken to prevent pesticide drift from the farm **to neighboring production areas**. Proper maintenance of spray equipment, observing proper conditions for spray applications and communicating with neighbors about any crops on their property are examples of these measures.

7.3.9 Refers to active measures being taken to prevent pesticide drift from the neighboring production areas **to the farm**.

Communication with neighbors concerning spray applications, planting vegetation in buffer areas, and pesticide sampling are examples of measures that can be taken to prevent PPP drift onto the farm.
