

## PPP Residue Analysis

Correct sampling procedures are followed as directed by the lab for PPP residue analysis. The laboratory's certification is on file and available for review. MRL testing is conducted annually, results are available for review. Target market MRL's are available in the following document. All chemicals have been applied within the legal limits in an effort to meet target market MRL's. In the event that a MRL is exceeded the fruit will not be shipped to that market. In the event that the fruit cannot be shipped to any market it will be destroyed.

### INSTRUCTIONS:

Your fruit must be sampled each year for pesticide residue. Columbia Fruit will collect one sample per commodity that is sent to CFP for packing. If you grow other commodities that you would like listed on your Global GAP certificate then **you will need to arrange for MRL testing of this fruit. It is your responsibility to ensure that you have a copy of an MRL result for each commodity you grow.**

You will also need to obtain a copy of the export countries allowable MRL. This can be obtained through the Northwest Hort. Council and is listed by commodity.
