

PPP Residue Analysis

Correct sampling procedures are followed as directed by the lab for PPP residue analysis. The laboratory's certification is on file and available for review. MRL testing is conducted annually, results are available for review. Target market MRL information is available in CB 7.6.1. All chemicals have been applied within the legal limits in an effort to meet target market MRL's.

Action Plan:

In the event that a MRL is exceeded the fruit will not be shipped to that market. In the event that the fruit cannot be shipped to any market it will be destroyed.
