

## PPP STORAGE

Plant protection products are stored in accordance with local regulations. The storage is:

- ✓ Sound –The storage facility is structurally sound with storage capacity that is adequate for the most PPPs that will be stored at one time.
- ✓ Secure, locked with only authorized people, with training in the safe handling of PPPs, having access to a key (see list below).
- ✓ Fire resistant
- ✓ Well ventilated with fresh air circulation to avoid any buildup of vapors
- ✓ PPPs are stored at temperatures as directed on product labels.
- ✓ Lighting will be enough to ensure ability to read PPP labels.
- ✓ Located away from other materials/surfaces that could cause contamination of the edible part of the crop.
- ✓ Shelving should be non-absorbent.
- ✓ Area should be able to contain 110% of the largest container to avoid contamination to the exterior of the storage facility
- ✓ Appropriate measuring/mixing containers available
- ✓ All chemicals are stored in their original container with labels for easy identification.
- ✓ In case of container breakage only, the replacement container will have all of the original label information.
- ✓ Any chemicals not approved for the crops being grown are segregated and labeled appropriately.
- ✓ A spill kit is available in the event of a spill.
- ✓ To prevent cross contamination from a spill liquids are not stored on shelves above powders.
- ✓ Able to retain spillage
- ✓ Key access to the plant protection storage is restricted to the following people.
- ✓ Liquids are not stored above powder or granular formulations.
