

Application Equipment

All fertilizer and PPP application equipment is calibrated and/or verified annually to ensure accurate application rates. A record of this activity is attached for review.

INSTRUCTIONS:

You must calibrate and verify all sprayers and spreaders annually. You also need to record the procedure you use and at a minimum it must contain the date, equipment name or number and a description of the procedure used. If you do not own the equipment then you need to verify proper application rate and record it or request calibration records from the equipment owner.

All PPP equipment is stored in a secure way to avoid product contamination.
