

## **Environment-Equipment Maintenance**

Regarding the environment, all fertilizer, irrigation and PPP application equipment will be kept in a good state of repair and when applicable equipment is to be calibrated and/ verified annually, by a technically responsible person, to ensure accurate application rates. A record of this activity and all repair/maintenance records are available for review.

### **INSTRUCTIONS:**

You must calibrate and verify all sprayers, and spreaders annually. You also need to record the business or person who performed the testing. At a minimum records must contain the date, equipment name or number and a description of the procedure used. If you do not own the equipment then you need to verify proper application rate and record it or request calibration records from the equipment owner.
